Subject: Application for Hosting and Storage Support for AI Dataset Collection

Respected Sir,

I hope this message finds you well. I am writing to seek permission and necessary support for hosting and storage infrastructure required for a project aimed at collecting datasets for training an AI model.

We are currently working on a project titled **“Voiceprint Geolocation: Predicting Geographic Origin from Speech”**, which involves gathering diverse voice data samples from participants to train and evaluate deep learning models. The goal of the project is to build a dataset that will aid in the development of intelligent systems capable of recognizing regional voice patterns and dialects.

To facilitate this, we kindly request the following:

- **Permission to host a simple data collection web application** on the department server or college domain.
- **Sufficient storage space** to store the submitted audio data and related metadata securely.
- **Network access or subdomain**, if possible, to make the platform accessible to participants within and outside the college.

We assure you that the data collected will be handled ethically and securely, with full consent from participants, and used strictly for academic and research purposes.

We would be grateful for your support in enabling this important step in our project. I am happy to discuss the technical details or provide any additional documentation required.

Thank you for your time and consideration.

Sincerely,

Prashamshya Banepali
